FIG. 7 is a block diagram of a system 700 for providing a customized speech database to a web-enabled handheld device 725. The system 700 includes a web-enabled handheld device 725, a wireless ISP 720, an Internet 715, a customized speech database 705, and a waveform synthesizer 740. The web-enabled handheld device 725 includes a web interface 730, a compressed database 735, an audio decoder 745, and a waveform synthesizer 740. The web interface 730 is connected to the compressed database 735 and the audio decoder 745. The compressed database 735 is connected to the waveform synthesizer 740. The audio decoder 745 is connected to the waveform synthesizer 740. The waveform synthesizer 740 is connected to the Internet 715. The Internet 715 is connected to the wireless ISP 720. The wireless ISP 720 is connected to the web-enabled handheld device 725. The customized speech database 705 is connected to the Internet 715.
